

CSE RATES PANAJI AS ONE OF THE BEST CITIES IN SOLID WASTE MANAGEMENT

Centre for Science and Environment, a New Delhi based environmental policy, advocacy and research institution surveyed 20 cities across the country that were supposedly rated as clean by a wide group of stakeholders (regulators, NGOs, academia)

On the basis of almost a two year study on surveying these cities from 2014-2016 on all the parameters of solid waste management. , CSE has rated Panaji as one of the best cities in solid waste management, for its unique concept of five level segregation, for encouraging segregation, for segregating dry waste into over 28 streams and for being able to decentralise the process of waste management which stands out in comparison to other cities in the country.
